

Lifecycle services

From essential support to optimisation

Auramarine’s mission is to ensure the operational efficiency of your fuel supply and auxiliary systems throughout their lifetime. We are by your side from design and delivery to regular maintenance and the latest retrofits and modernisation solutions once in service.

Every aspect of a ship’s, power or industrial plant’s fuel supply and auxiliary system is crucial for maximising its operational efficiency and system health. Diligent planning and preparation helps keep your operational risks and costs at the lowest possible levels. It also ensures that your fuel and auxiliary systems always meet their intended requirements under pre-defined operating conditions.

Global spares and services availability

The rapid, global availability of spares for the right price is essential.

Auramarine spare parts, aftersales services and technical support are globally available through our main hubs in Finland and Shanghai, China.

A global representative network is at your service in over 20 countries

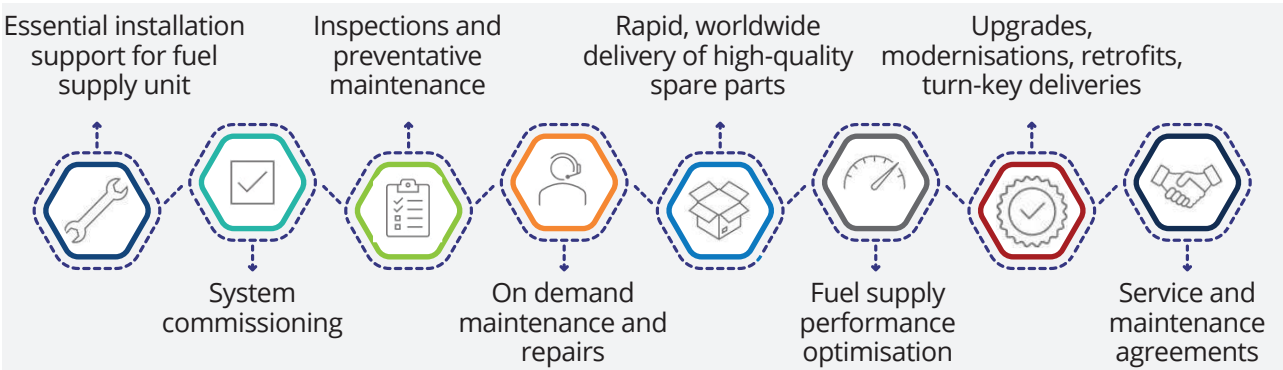

We offer a range of flexible options for simple and efficient spare parts administration:

On demand spare parts delivery

Original spare parts are guaranteed to perfectly fit your equipment and ensure peak performance. Scheduling can be critical; therefore we only use long-term trusted logistics partners.

Customised spare part kits for proactive maintenance

Our customised spare parts kits can be tailored to match your requirements and help you maintain an optimal wear parts inventory at all times. This solution is based on specialist software, which intelligently suggests a tailor-made spare parts kit for your particular fuel supply system; no more, no less. You can subscribe to receive an up-to-date, regular free-of-charge suggested wear parts list for your ship or fleet. If adopted, this software-based solution pays off through minimised fuel system downtime and smooth spares administration.

Modernisation packages

Auramarine's fuel supply units are renowned for their durability and long service life. Later on in their lifecycle, you can upgrade your equipment to maintain its peak performance. This could typically include cooler/heater installations, automation advances or fuel change-over solutions.

Upgrade packages improve system longevity, reliability, fuel efficiency, engine performance and environmental protection. They can be delivered in parts or as modular solutions, with or without installation services.

Service and maintenance calls

Auramarine service engineers are experienced and service-minded, and available globally at short notice. If necessary, they can also recommend any further steps that could be taken to improve your fuel system's operational efficiency.

Trainings

Auramarine service training ensures that engine-room personnel are familiar with equipment features and their proper use, and that proactive maintenance is correctly carried out at the right time.

Service and maintenance agreements

Understanding fleet-wide and asset-specific requirements in relation to the asset's age, equipment and deployment, is beneficial when structuring intelligent spare parts sourcing and regular equipment monitoring regimes. For operators with multiple Auramarine systems installed within their fleet, we offer numerous benefits including specially discounted and stocked volumes of spare parts, dedicated service engineer support, planned and condition maintenance schemes, and the priority availability of units for upgrades.

We are committed to ensure the peak efficiency of your Auramarine system throughout its lifetime.

Auramarine is your trusted fuel systems expert for the marine and power industries. Our proud heritage stems from the company's foundation in Finland in the early 1970s. Since then we have delivered over 15,000 robust and reliable auxiliary systems to our customers all over the world, continuously aiming for superior service and customer value.

WE ARE THE PIONEERS IN FUEL SYSTEMS.
